

SUSTAINABLE PARTNERSHIPS FOR A GREENER FUTURE

UMI is committed to partnering with manufacturers that prioritize eco-friendly practices, ethical sourcing, and responsible production methods. We carefully select brands that invest in sustainable innovations to create durable surfaces that contribute to healthier living spaces while reducing environmental impact.

Infinity leads in sustainability, building an artificial reservoir in 2021 to cut water use, achieving a 10.5% reduction in three years and 100% wastewater reuse in production. Their commitment to sustainability extends to packaging, using 1,592 tons of recycled paper (saving 4,000 trees annually), 386 tons of recycled plastic (equivalent to removing 350 cars from the road), and only FSC-certified wood from responsibly managed forests. Infinity prioritizes in-house recycling, recovering 98% of raw waste for reuse in production. Sourcing only from certified quarries, we ensure materials are extracted responsibly, away from polluted areas, while continually increasing recycled content in our slabs.
